

# Leading software publisher in the modernisation, operational maintenance and deployment of strategic applications

Since 1991, Metrixware Systemobjects has been designing and marketing Products and Technologies for the modernisation, operational maintenance and deployment of strategic applications at the heart of the businesses of major companies, public administrations and medium-sized businesses, in France, West Africa and internationally.

Metrixware Systemobjects maintains a strong capacity for expertise and innovation by allocating a significant proportion of its investments to R&D and by supporting customers on strategic projects, which is the raison d'être of our products.

## Our solutions

- **Flexibility of our solutions** : standard components that can be customised
- **Support for all major deployment environments** : Windows, Linux, Power Linux, IBM i, IBM z/OS, IBM Aix
- **Technology portfolio** built up over more than 30 years, agnostic to our customer's businesses
- **Promotion of Open source** : integration of established, long-lasting components and contributions to certain modules that are critical to our products
- **User-friendly solutions** based on mobility, UX/UI user experience and ergonomic workshop with users
- All our middleware, tools and platforms are **multilingual**, including Asian and Arabic languages y compris les langues asiatiques et arabes

## One Technology Portfolio Multiple Solutions

## Governance & GRC

The Isiman software platform is a «low-code» tool for digitising the most critical business processes in banking, industry (luxury goods, offshore and oil & gas etc.), retail and public administration. The solution can be installed on IBM i, Power Linux and Windows environments.

Its components are deployed by customers with strong performance and management requirements for their most sensitive activities: fraud detection, anomaly monitoring, pollution analysis, process audit, business intelligence, incident geolocation, etc.

Its flexibility and functional coverage ensure that it can be adapted to the businesses and processes of each organisation, regardless of the activities covered.

## Maintenance in Operational Conditions

Operational maintenance addresses the need for organisations to maintain and upgrade applications that are essential and critical to their business or their government mission.

It is often the logical consequence of an urbanisation or modernisation operation carried out by Metrixware. We take full responsibility for the smooth operation of your strategic application alongside your key business players.

Our tools and skills enable us to operate in all business sectors (banking, insurance, administration, industry, etc.) on IBM z/OS, IBM i, Linux and Windows environments.

## Urbanisation & Modernisation

The challenges of modernising a strategic application on IBM z/OS, IBM i (AS/400), Linux and Windows environments are numerous: budget constraints, security, time to market, loss of skills, technical debt, technological obsolescence, etc.

Our migration, transformation, re-engineering and reverse documentation tools, combined with the experience and expertise of our teams, enable us to address the most sensitive situations in complete confidence, with customised support and a solution tailored to your needs.

Modernising applications and processes
